Today's monetary policy decision: how the language changed from prior meeting

~~25 January~~ 7 March 2024

The Governing Council today decided to keep the three key ECB interest rates unchanged. ~~The incoming information has broadly confirmed its previous assessment of the medium-term. Since the last Governing Council meeting in January, inflation outlook. Aside~~has declined further. In the latest ECB staff projections, inflation has been revised down, in particular for 2024 which mainly reflects a lower contribution from an energy-related upward base effect on headline inflation, the declining trend in prices. Staff now project inflation to average 2.3% in 2024, 2.0% in 2025 and 1.9% in 2026. The projections for inflation excluding energy and food have also been revised down and average 2.6% for 2024, 2.1% for 2025 and 2.0% for 2026. Although most measures of underlying inflation has continued, have eased further, domestic price pressures remain high, in part owing to strong growth in wages. Financing conditions are restrictive and the past interest rate increases keep being transmitted forcefully into financing conditions. Tight financing conditions are dampening continue to weigh on demand, and this which is helping to push down inflation. Staff have revised down their growth projection for 2024 to 0.6%, with economic activity expected to remain subdued in the near term. Thereafter, staff expect the economy to pick up and to grow at 1.5% in 2025 and 1.6% in 2026, supported initially by consumption and later also by investment.

The Governing Council is determined to ensure that inflation returns to its 2% medium-term target in a timely manner. Based on its current assessment, the Governing Council considers that the key ECB interest rates are at levels that, maintained for a sufficiently long duration, will make a substantial contribution to this goal. The Governing Council's future decisions will ensure that ~~its~~ policy rates will be set at sufficiently restrictive levels for as long as necessary.

The Governing Council will continue to follow a data-dependent approach to determining the appropriate level and duration of restriction. In particular, the Governing Council's interest rate decisions will be based on its assessment of the inflation outlook in light of the incoming economic and financial data, the dynamics of underlying inflation and the strength of monetary policy transmission.

Key ECB interest rates

The interest rate on the main refinancing operations and the interest rates on the marginal lending facility and the deposit facility will remain unchanged at 4.50%, 4.75% and 4.00% respectively.

Asset purchase programme (APP) and pandemic emergency purchase programme (PEPP)
The APP portfolio is declining at a measured and predictable pace, as the Eurosystem no longer reinvests the principal payments from maturing securities.

The Governing Council intends to continue to reinvest, in full, the principal payments from maturing securities purchased under the PEPP during the first half of 2024. Over the second half of the year, it intends to reduce the PEPP portfolio by €7.5 billion per month on average. The Governing Council intends to discontinue reinvestments under the PEPP at the end of 2024.

The Governing Council will continue applying flexibility in reinvesting redemptions coming due in the PEPP portfolio, with a view to countering risks to the monetary policy transmission mechanism related to the pandemic.

Refinancing operations

As banks are repaying the amounts borrowed under the targeted longer-term refinancing operations, the Governing Council will regularly assess how targeted lending operations and their ongoing repayment are contributing to its monetary policy stance.

The Governing Council stands ready to adjust all of its instruments within its mandate to ensure that inflation returns to its 2% target over the medium term and to preserve the smooth functioning of monetary policy transmission. Moreover, the Transmission Protection Instrument is available to counter unwarranted, disorderly market dynamics that pose a serious threat to the transmission of monetary policy across all euro area countries, thus allowing the Governing Council to more effectively deliver on its price stability mandate.

The President of the ECB will comment on the considerations underlying these decisions at a press conference starting at 14:45 CET today.
